New projects pending approval to promote in queue:

AG – Charity Division – Annual non-profit reports
Recently passed legislation requires the AG to accept annual filings from Hawaii nonprofit organizations. HIC will process the payments and create a search utility for information that the AG currently manages. This application is similar to the DCCA Annual Filing and Business Name Search applications. The funding model will most likely be a monthly hosting fee and a small processing fee.
Due to the legal requirements this is a high priority application, which needs to be completed by late October or Early November 2008.

DLNR –Land Commission - Internet Permitting (Land Use)
DLNR is under the gun to implement a permitting system for use of public beaches for weddings and other ceremonies. HIC and LC staff are discussing the most expeditious approach to having something ready in September. The Chairperson has been flooded by email and written complaints about the current paper system. The funding model is transactional.
This is a high priority application for DLNR. They have volunteered to suspend development on Camping permits until this is done.

HCDA – Hosting of Community Outreach portal for projects
HIC and HCDA have been evaluating community outreach tools. Functionality includes posting plans and reports for public comment, managing consultants' working on public outreach projects, and contextual feedback reporting. We found one offering that HIC could purchase, maintain and host. The software could also be used for other agencies needing similar tools (Environmental Impact Studies, Transportation Plans, etc…) at a fraction of the cost. This project will include a monthly or annual fee for hosting the service.
This project will not impact require development resources from our staff. It will require systems administration expertise.

OMPO – Site design and hosting
OMPO would like HIC to design a new site for them and host the site. Work to be done on a Time and Materials basis with monthly hosting and maintenance after going live.
This project should not impact existing projects.

DLNR – Water Use Reporting
DLNR wants to allow well owners to report water use to the department. This application is similar to the fish catch reporting that HIC accepts for Aquatic Resources already. The funding model is time and materials with some monthly hosting fee.
The population of users is relatively low, therefore it is a lower priority application than many other applications in the queue.
